2022 Newest Features

Weather alert/warning notifications
This pop-up notification will warn the consumer of possible hazardous weather conditions and advice the consumer to secure any open shade device.

Command notification
A pop-up notification will alert the consumer and all persons registered to this account that the shade has been opened or closed via Bluetooth or WiFi.

Control the amount of shade
The consumer can now control the amount of shade in 5% increments while using Bluetooth, Wi-Fi or voice control such as; Alexa/Google Home/Siri.

Operate multiple shades simultaneously
If you have multiple remotes on one hub, the user can now operate a shade from each remote simultaneously using Alexa/Google Home/Sir.

Multi-colored RGB LED lights
We now have multi-colored lights with seven different color choices. With multiple flashing or fading options. You can adjust the brightness and speed.

App control of music and speakers
Connect the music from your smart phone to our new awning smart speaker system. It can turn on the speakers when you approach the area and start playing music from where you left off last time.
